Consider the following function.

$$f(x) = \frac{1}{x^2 - 25}$$

Complete the following table. (Round your answers to two decimal places.)

x	-5.5	-5.1	-5.01	-5.001	-4.999	-4.99	-4.9	-4.5
f(x)

A 25-foot ladder is leaning against a house, as shown in the figure below.

If the base of the ladder is pulled away from the house at a rate of 2 feet per second, the top will move down the wall at a rate given by the following equation, where x is the distance between the base of the ladder and the house.

$$r = \frac{2x}{\sqrt{625 - x^2}} \text{ ft/sec}$$

(a) Find the rate r when x is 15 feet.

(b) Find the rate r when x is 24 feet.

(c) Find the limit of r as $x \rightarrow 25^-$.
